

ScrumWorks Pro 4.4

ScrumWorks Pro was created to be as intuitive and streamlined as Scrum itself.--it increases project transparency, encourages collaboration, and reduces management overhead. It's an empowering combination that yields higher product quality, and lowers project risk and development costs. ScrumWorks Pro represents the first Scrum project and program management tool truly engineered to meet the unique demands of large enterprises with complex development environments and distributed teams.

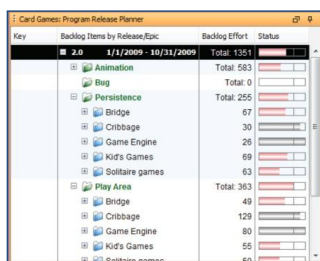

ScrumWorks Pro is now fully integrated with the CollabNet TeamForge platform, creating an end-to-end Agile Application Lifecycle Management (Agile ALM) platform for distributed software development. Now users of each product can view and modify scrum assets, enhancing team-wide collaboration. ScrumWorks Pro artifacts, such as sprints, backlog items, tasks, releases and themes, can be linked with source code, wiki entries, email messages, bugs and other artifacts in the TeamForge platform, enabling traceability and advanced search capabilities.

SCRUMWORKS PRO FEATURES

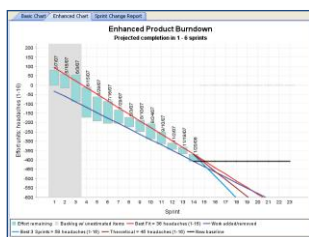

Program Management

Contains enterprise capabilities to define and manage milestones and feature goals (Epics) across multiple product backlogs. ScrumWorks Pro provides a flexible way to more accurately model work within the largest, most complex development environments.

Release Planning

The Program Release Planner View presents the high-level status of the entire program release, organizing work by epic, then product. Because users can track the progress of constituent products within a single view, forecasting release dates for programs is informed based on empirical data.

Release Forecasting

The Release Forecast Report is based on empirical progress and helps management forecast release dates with greater accuracy.

KEY BENEFITS

- Enables Agile ALM
- As Intuitive as Scrum Itself
- Great for small workgroups, large enterprises and distributed teams
- Increases Team Collaboration
- Maximizes Business Value and ROI

ANALYST AND CUSTOMER QUOTES:

“CollabNet has come up with a clever search and aggregation facility within their project planner to identify and group project goals and objectives that gets you beyond the rigid hierarchical schemes of most project planners – agile or otherwise.”

--Tony Baer, Ovum

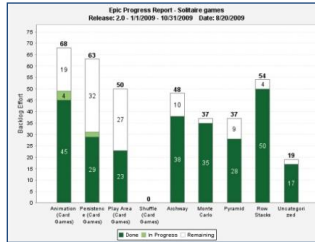

"ScrumWorks has played a central role in our adoption of agile software development practices. It has eased the coordination of work between our geographically distributed teams, and its clean, intuitive interface is a natural fit with Scrum. It's so easy to use that you can focus on the work without having to think about the tool."

Fortune 500 Technology Company

Key	Backlog Items by Release/Epic	Backlog ...	Status
	Play Area	Total: 50	
	Shuffle	Total: 0	
	Archway	Total: 48

EPICS

Epics provide feature decomposition and formal goal setting within release cycle milestones. Epics are planned and tracked in the Release Planner view, with visible roll-up progress indicators providing real-time progress feedback.

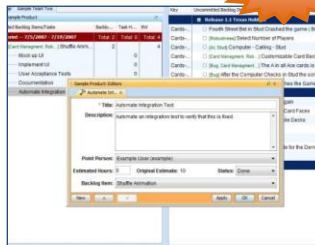

Advanced Reporting

New reports track the progress of cross-cutting feature goals as well as milestone forecasting for component groups. Several popular community-requested reporting tools have been added

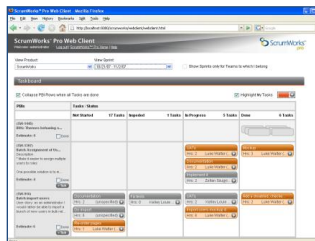

Estimated vs. Actual Reporting

Teams can now compare initial task estimates to the actual amount of time it took to finish the tasks. This helps teams hone estimate skills and improve release planning.

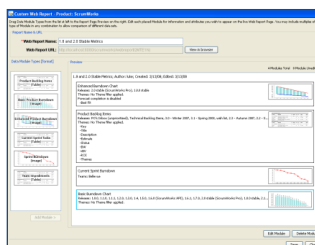

Original Task Estimates

Teams can now compare initial task estimates to the actual amount of time it took to finish the tasks. This helps teams improve release planning.

Task Board

The visual "task board" interface allows users to track the status of team tasks, individuals' tasks, and sprint progress at a glance.

Web Reports

Web reports can be quickly generated and accessed through a single unauthenticated link.

ScrumWorks Pro is the only commercial project management solution designed exclusively for the Scrum framework.

Here are just a few of its benefits:

- An intuitive, drag-and-drop interface lets users focus on their sprints, while reinforcing the processes of the Scrum lifecycle.
- Allows teams, product owners and stakeholders the flexibility to manage agile projects at the program, product, release and sprint levels.
- Contains rich collaboration capabilities such as team task boards and email notifications which increase project transparency.
- Extensive reporting, forecasting, and analytic capabilities keep a project's Return on Investment (ROI) front-and-center. Takes the guesswork out of release planning.
- Flexible and Robust Web Services API with upgrades – simplifies data access and data management.
- Designed to work within your organization's existing infrastructure. Integrates with a wide variety of popular development tools and platforms (including the CollabNet TeamForge platform).
- Flexible program management meets the growing demands of enterprise customers by allowing them to manage high-level features and milestones that span multiple product backlogs.
- Role-based access with read-only publishing increases project transparency, collaboration and ease of administration.
- Includes both a rich desktop client and a light web-based client for anywhere access.
- Supports popular OS platforms: Mac OS® x10.5.2+, Linux and Windows® XP/Vista/Server 2003/Server 2008.
